(1) (b) (i)

Figure 1 consists of two histograms. The left histogram shows the distribution of the number of non-zero elements in the sparse matrix A (size 10000x10000). The x-axis is labeled 'Number of non-zero elements' and ranges from 0 to 10. The y-axis is labeled 'Frequency' and ranges from 0 to 100. The distribution is highly skewed, with a peak at 1 non-zero element per row, which has a frequency of approximately 100. The frequency drops sharply for 2 non-zero elements (approx. 20) and continues to decrease for higher counts. The right histogram shows the distribution for matrix B (size 10000x10000). The x-axis is labeled 'Number of non-zero elements' and ranges from 0 to 10. The y-axis is labeled 'Frequency' and ranges from 0 to 100. The distribution is also highly skewed, with a peak at 1 non-zero element per row, which has a frequency of approximately 100. The frequency drops sharply for 2 non-zero elements (approx. 20) and continues to decrease for higher counts.
