<p>The graph shows two curves: one for % Passing (top curve) and one for % Retained (bottom curve). The x-axis is logarithmic, ranging from 0.01 to 100 mm. The y-axis ranges from 0 to 100%. Arrows point to specific data points on both curves. Below the graph, a horizontal line separates the curves from the soil classification labels: Clay, Slit, Sand, Gravl, and cobbles.</p>

<p>The graph plots the percentage of material retained against sieve size. The x-axis shows sieve sizes from 0 to 100, with major ticks at 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100. The y-axis shows the percentage of material retained from 0 to 100, with major ticks every 10 units. A curve is plotted through data points, starting near 100% retention at the largest sieve size and approaching 0% retention at the smallest sieve size. Arrows point to specific data points: one arrow points to the #10 sieve size at approximately 17.4% retained; another arrow points to the #40 sieve size at approximately 11.3% retained; and a third arrow points to the #200 sieve size at approximately 2.6% retained.</p>

			496343.20	620381.50			اجمالي الكمية حتى تاريخه

ملحوظة : سيتم تحديث المحضر والجدول عند توريد كميات ببوبنات جديدة

على ان يلتزم المقاول بحفظ هذه الكراتات والبوبنات لديه وتكون في عهده حتى نهاية المشروع او عند طلبها من الهيئة العامة للطرق والكباري في اي وقت تراه الهيئة .

وبحصر الكميات الموردة طبقاً للبوبنات تبين ان كل الكميات المنفذة بالطبعية تم توريدتها من محجر مطار سفنكس معتمد

* وعليه يتم صرف الكميات المنفذة هندسياً طبقاً للفقطاعات العرضية التصميمية .

* ويتم صرف قيمة المادة المحجرية للكميات الهندسية طبقاً للفقطاعات العرضية بعد اضافة نسبة الدمك %٢٥ .

وعلي هذا وفق الجميع :
