A hand-drawn diagram of a cell. It shows a rectangular cell with a thick outer boundary labeled 'cell wall' and a thinner inner boundary labeled 'cell membrane'. Inside the cell, there is a large, irregularly shaped area labeled 'cytoplasm'. In the center of the cell is a large, oval-shaped structure labeled 'nucleus'.

The image contains two hand-drawn diagrams. The top diagram is a cross-section of a water pump. It shows a central vertical shaft with a handle at the top and a pump mechanism at the bottom. Water is shown being drawn into the pump from below and being pushed upwards into a pipe. The bottom diagram is a cross-section of a water turbine. It shows a central vertical shaft with a turbine wheel in the middle. Water is shown flowing from above through the turbine wheel, which is connected to a generator. The water then flows out from the bottom.

A hand-drawn diagram of a water cycle. At the top, a wavy line represents the sun. Below it, a cloud is drawn with arrows pointing upwards from the water surface, labeled 'Evaporation'. To the right, another cloud is shown with arrows pointing downwards, labeled 'Condensation'. Below the clouds, a line represents the ground with arrows pointing downwards from the clouds, labeled 'Precipitation'. At the bottom, a large body of water is shown with arrows pointing back up towards the clouds, labeled 'Collection'.

A hand-drawn diagram of a cell. It shows a rectangular cell with a thick outer boundary labeled 'cell wall' and a thinner inner boundary labeled 'cell membrane'. Inside the cell, there is a large, irregularly shaped area labeled 'cytoplasm'. In the center of the cell is a large, oval-shaped structure labeled 'nucleus'.

Water is shown being drawn into the pump from below and being pushed upwards into a pipe. The bottom diagram is a cross-section of a water turbine. It shows a central vertical shaft with a turbine wheel in the middle. Water is shown flowing from above through the turbine wheel, which is connected to a generator. The water then flows out from the bottom.

A hand-drawn diagram illustrating the flow of water on a roof. The diagram is divided into two main sections by a vertical line. The left section shows a roof profile with a peak and a valley. Arrows indicate water flowing down the slope into the valley. The right section shows a cross-section of a roof with a vertical wall on the left and a sloped roof on the right. Arrows indicate water flowing down the roof slope and then down the vertical wall. The diagram is drawn in blue ink on a white background.
