

المنطقة الخامسة - ( غرب الدلتا )

السيد المهندس / رئيس قطاع التنفيذ والمناطق

تحية طيبة .. وبعد ،

بالإحالة إلى مشروع القطار الكهربائي فائق السرعة ( برج العرب - العلمين )

نشرف بأن نرفق لسيادتكم طيه المقايسة المعدلة لقطاع الأتي :

| الشركة                        | من كم   | إلى كم  | اتجاه   |
|-------------------------------|---------|---------|---|
| شركة القمة للمقاولات العمومية | 361+300 | 361+500 | اعمال الجسر الترابي و طبقات الاساس و خرسانات الميول |

برفاء من سيادتكم التفضل بالأحاطه والتوجيه بالازم  
وتفضلا بقبول فائق الاحترام والتقدير ،

رئيس الادارة المركزية

المنطقة الخامسة - غرب الدلتا

عميد مهندس /

"هاني محمد محمود طه"

**مشروع القطار الكهربائي فائق السرعة قطاع (برج العرب-العلمين)**  
**المقايسة المعدلة لبنود الأعمال الجسر الترابي وطبقات الأساس وخرسانات المبول لشركة القمة للمقاولات العمومية**  
**القطاع من المحطة ٣٦١+٣٠٠ إلى ٣٦١+٥٠٠**

| رقم البند | بيان الأعمال   | الوحدة | الكمية | الفئة  | الاجمالي  |
|-----------|--|--------|--------|--------|-----------|
| ١         | أعمال الحفر  |        |        |        |           |
| ١-١       | بالمتر المكعب اعمال حفر باستخدام المعدات الميكانيكية لجميع انواع التربة عدا التربة الصخرية وتسوية السطح بالات التسوية والرش باليادة الاصلية للوصول الى نسبة الرطوبة المطلوبة والدملك الجيد بالهراسات للوصول الى اقصى كثافة جافة (٩٥% من الكثافة الجافة القصوى) ومحمل على البند تحويل ونقل التربة الزائدة لمسافة ٥٠٠ متر من محور الطريق ويتم التنفيذ طبقا للنماذج التصميمية والقطاعات العرضية التموذجية والرسومات التفصيلية المعتمدة والبند بجميع مشتقاته طبقا لاصول الصناعة ومواصفات الهيئة العامة للطرق والكباري وتعليمات المهندس المشرف.<br>يتم احتساب علاوة ١ جنية لكل ١ كم بزيادة  | ٣م     | ١٧٠١٩  | ٢٠     | ٣٤٠,٣٨٠   |
| ٢-١       | بالمتر المكعب اعمال حفر باستخدام المعدات الميكانيكية في التربة المتباينة (الاراضي الزراعية) او الاماكن ذات منسوب مياه منتفع (طبقا لرؤية المهندس المشرف) عدا التربة الصخرية وتسوية السطح بالات التسوية والرش باليادة الاصلية للوصول الى نسبة الرطوبة المطلوبة والدملك الجيد للهراسات للوصول الى اقصى كثافة جافة (٩٥% من الكثافة الجافة القصوى) ومحمل على البند تحويل ونقل التربة الزائدة لمسافة ٥٠٠ متر من محور الطريق والفتنة تشمل عمل تسوينات وذلك باستخدام الاراضي الزراعية المجاورة لنقل ناتج الحفر على مراحل باستخدام وسيلة النقل المناسبة لضيق اماكن المرور وذلك طبقا لرؤية المهندس المشرف ويتم التنفيذ طبقا للنماذج التصميمية والقطاعات العرضية التموذجية والرسومات التفصيلية المعتمدة والبند بجميع مشتقاته طبقا لاصول الصناعة ومواصفات الهيئة العامة للطرق والكباري وتعليمات المهندس المشرف.<br>يتم احتساب علاوة ١ جنية لكل ١ كم بزيادة | ٣م     | ٣٠٠    | ٢٣     | ٩٩,٠٠     |
| ٢         | أعمال الازالة والتقطير   |        |        |        |           |
| ٢-٢       | بالمتر المسطح اعمال تهثير الموقع من الاشجار والمزروعات والمخلفات في مناطق الدلتا ذات الطبيعة الزراعية الكثيفة والخالص منها بالمقابل العمومية تمهدانا لاعمال الرفع المساحى لكامل حدود المشروع طبقا للشروط والمواصفات وتعليمات المهندس المشرف.   | ٢م     | ٩٧٢    | ٥      | ٤,٨٦٠     |
| ٣         | اعمال الردم  |        |        |        |           |
| ١-٣       | بالمتر المكعب اعمال توريد وتشغيل ابرية صالحة للردم و مطابقة للمواصفات والتشغيل باستخدام المعدات بسمك لا يزيد عن ٥٠ سم حتى تنسوب ٢ متر و بسمك لا يزيد عن ٢٥ سم لاستكمال المنسوب التصميمي لتشكيل الجسر والاكتاف (نسبة تحمل كاليفورنيا لا تقل عن ١٥%) و رشها باليادة الاصلية للوصول الى نسبة الرطوبة المطلوبة والدملك الجيد بالهراسات للوصول الى اقصى كثافة جافة (٩٥% من الكثافة الجافة القصوى) ويتم التنفيذ طبقا للنماذج التصميمية والقطاعات العرضية التموذجية والرسومات التفصيلية المعتمدة والبند بجميع مشتقاته طبقا لاصول الصناعة ومواصفات الهيئة العامة للطرق والكباري وتعليمات المهندس المشرف.<br>مسافة النقل ٢ كم<br>يتم احتساب علاوة ١,٤ جنية لكل ١ كم بزيادة او النقصان<br>- السعر يشمل عمل تسوينات وتقطير واختبارات ونقل لموقع العمل حتى مسافة ٢ كم<br>- السعر يشمل قيمة المادة المحجرية   | ٣م     | ١٨٠٠   | ٨٥     | ١,٥٣٠,٠٠  |
| ٤         | علاوة مسافة نقل للتربة لمسافة ٩٤ كم = ١٤٩٢ = ١٢٨,٨ جنية  | ٣م     | ١٤٤٠٠  | ١٢٨,٨٠ | ١,٨٥٤,٧٢٠ |

### **Introduction:**

The Plate Load test is designed to determine the vertical deformation and strength characteristics of soil by assessing the force and amount of penetration with time when a rigid plate is made to penetrate the soil.

The test to be carried out on the native soil according to German specifications DIN 18134.

### **Test methods :**

- 1- The German standard DIN 18134 was applied to define the apparatus used, the loading system, test conditions, and procedure for plate load test.
- 2- Loading plates with a diameter of 600 mm have a thickness of 25mm and are provided with equally spaced stiffners with even upper faces parallel to the plate bottom face to allow 300 mm plate to be placed on top of it.
- 3- The loading system consisted of a hydraulic pump connected to a hydraulic jack of 700 bar capacity, which is capable of applying and releasing the load stages.
- 4- The dial gauge used to measure the plate settlement has a resolution of 0.01mm and the lever ratio was equal to 1.
- 5- The temperature at the time of the test was 25°.
- 6- The plate was carried out on a native soil (sand-gravel). The test surface area was levelled and the plate was bedded on this surface.
- 7- The hydraulic jack was placed on the middle of, and at normal to, the loading plate beneath the reaction loading system and secured against tilting.
- 8- The reaction loading system was a heavy multi-purpose excavator (more than 20 ton).

### **Description of experiment:**

- 1- Loading, unloading and reloading regims were applied according to DIN 18134 for the plate load test to estimate the resilient modulus
- 2- Prior to the test, the force transducer and dial gauge were set to zero, after which a load was applied corresponding to a stress of 0.01 MN/m<sup>2</sup>.
- 3- In the first loading cycle, the load was increased until a normal stress of 0.25 MN/m<sup>2</sup> was reached, and the loading increment was 0.025 MN/m<sup>2</sup>. The load was released in four stages.
- 4- Following unloading, a further second loading cycle was carried out, in which, the load was increased only to the penultimate stage of the first cycle.

### Conclusions:

The present test results which obtained from the plate loading tests of the native soil on middle embankment layer of the electric express train project at location (from 361+350 to 361+450) in accordance to the German standard , DIN 18134 are illustrated in table 7 .

Table 7 :Test results

| Location | Ev1(MN/m <sup>2</sup> ) | Ev2(MN/m <sup>2</sup> ) | Ev2/Ev1 ratio |
|----------|-------------------------|-------------------------|---------------|
| 361+350  | 65.13                   | 105.51                  | 1.62          |
| 361+450  | 85.36                   | 130.64                  | 1.53          |

### Introduction:

The Plate Load test is designed to determine the vertical deformation and strength characteristics of soil by assessing the force and amount of penetration with time when a rigid plate is made to penetrate the soil.

The test to be carried out on the native soil according to German specifications DIN 18134.

### Test methods :

- 1- The German standard DIN 18134 was applied to define the apparatus used, the loading system, test conditions, and procedure for plate load test.
- 2- Loading plates with a diameter of 600 mm have a thickness of 25mm and are provided with equally spaced stiffeners with even upper faces parallel to the plate bottom face to allow 300 mm plate to be placed on top of it.
- 3- The loading system consisted of a hydraulic pump connected to a hydraulic jack of 700 bar capacity, which is capable of applying and releasing the load stages.
- 4- The dial gauge used to measure the plate settlement has a resolution of 0.01mm and the lever ratio was equal to 1.
- 5- The temperature at the time of the test was 25°.
- 6- The plate was carried out on a native soil (sand-gravel). The test surface area was levelled and the plate was bedded on this surface.
- 7- The hydraulic jack was placed on the middle of, and at normal to, the loading plate beneath the reaction loading system and secured against tilting.
- 8- The reaction loading system was a heavy multi-purpose excavator (more than 20 ton).

### Description of experiment:

- 1- Loading, unloading and reloading regimens were applied according to DIN 18134 for the plate load test to estimate the resilient modulus.
- 2- Prior to the test, the force transducer and dial gauge were set to zero, after which a load was applied corresponding to a stress of 0.01 MN/m<sup>2</sup>.
- 3- In the first loading cycle, the load was increased until a normal stress of 0.25 MN/m<sup>2</sup> was reached, and the loading increment was 0.025 MN/m<sup>2</sup>. The load was released in four stages.
- 4- Following unloading, a further second loading cycle was carried out, in which, the load was increased only to the penultimate stage of the first cycle.

### Conclusions:

The present test results which were obtained from the plate loading tests of the native soil on coarse aggregate filter layer of the electric express train project at location from St(361+300) to St(361+520)km in accordance to the German standard , DIN 18134 are illustrated in table 7 .

Table 7 :Test results

| Location    | Ev1(MN/m <sup>2</sup> ) | Ev2(MN/m <sup>2</sup> ) | Ev2/Ev1 ratio |
|-------------|-------------------------|-------------------------|---------------|
| St(361+460) | 65.59                   | 215.85                  | 3.29          |
| St(361+500) | 91.12                   | 175.25                  | 1.92          |

### Introduction:

The Plate Load test is designed to determine the vertical deformation and strength characteristics of soil by assessing the force and amount of penetration with time when a rigid plate is made to penetrate the soil.

The test to be carried out on the native soil according to German specifications DIN 18134.

### Test methods :

- 1- The German standard DIN 18134 was applied to define the apparatus used, the loading system, test conditions, and procedure for plate load test.
- 2- Loading plates with a diameter of 600 mm have a thickness of 25mm and are provided with equally spaced stiffeners with even upper faces parallel to the plate bottom face to allow 300 mm plate to be placed on top of it.
- 3- The loading system consisted of a hydraulic pump connected to a hydraulic jack of 700 bar capacity, which is capable of applying and releasing the load stages.
- 4- The dial gauge used to measure the plate settlement has a resolution of 0.01mm and the lever ratio was equal to 1.
- 5- The temperature at the time of the test was 25°.
- 6- The plate was carried out on a native soil (sand-gravel). The test surface area was levelled and the plate was bedded on this surface.
- 7- The hydraulic jack was placed on the middle of, and at normal to, the loading plate beneath the reaction loading system and secured against tilting.
- 8- The reaction loading system was a heavy multi-purpose excavator (more than 20 ton).

### Description of experiment:

- 1- Loading, unloading and reloading regims were applied according to DIN 18134 for the plate load test to estimate the resilient modulus
- 2- Prior to the test, the force transducer and dial guage were set to zero, after which a load was applied corresponding to a stress of 0.01 MN/m<sup>2</sup>.
- 3- In the first loading cycle, the load was increased until a normal stress of 0.25 MN/m<sup>2</sup> was reached, and the loading increaement was 0.025 MN/m<sup>2</sup>. The load was released in four stages.
- 4- Following unloading, a further second loading cycle was carried out, in which, the load was increased only to the penultimate stage of the first cycle.

### Conclusions:

The present test results which obtained from the plate loading tests of the native soil on coarse aggregate layer of the electric express train project at location (from 361+300 to 361+500) in accordance to the German standard , DIN 18134 are illustrated in table 7.

Table 7 :Test results

| Location       | Ev1(MN/m <sup>2</sup> ) | Ev2(MN/m <sup>2</sup> ) | Ev2/Ev1 ratio |
|----------------|-------------------------|-------------------------|---------------|
| <b>361+300</b> | 77.90                   | 166.34                  | 2.14          |
| <b>361+500</b> | 63.31                   | 115.00                  | 1.82          |

 G.S = 2.61 g/cm<sup>3</sup>

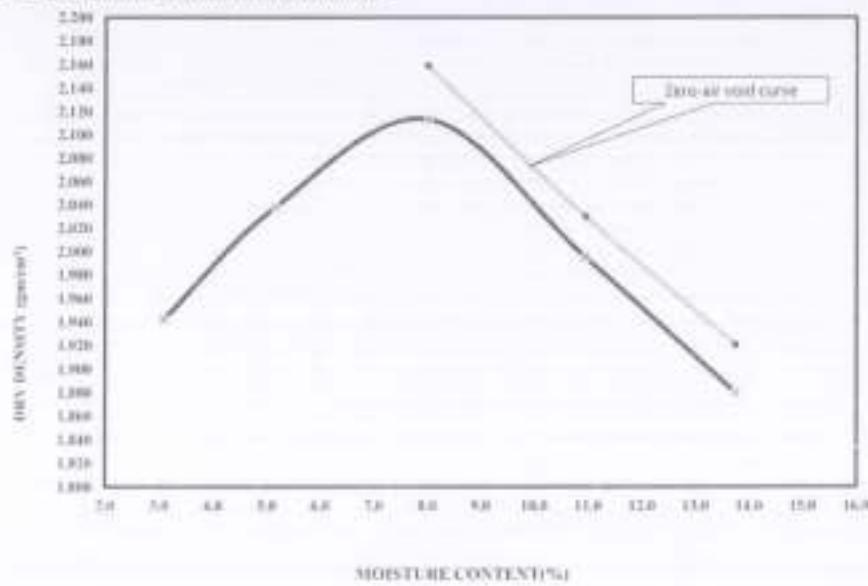

#### A- Density Calculations :-

|                                    | 1     | 2     | 3     | 4     | 5     |
|------------------------------------|-------|-------|-------|-------|-------|
| Weight of wet soil+mould (g)       | 10070 | 10380 | 10686 | 10535 | 10370 |
| Weight of mould (g)                | 5665  | 5665  | 5665  | 5665  | 5665  |
| Weight of wet soil (g)             | 4405  | 4715  | 5021  | 4870  | 4705  |
| Volume of mould (cm <sup>3</sup> ) | 2200  | 2200  | 2200  | 2200  | 2200  |
| Wet density (g/cm <sup>3</sup> )   | 2.002 | 2.143 | 2.282 | 2.214 | 2.139 |
| Dry density (g/cm <sup>3</sup> )   | 1.942 | 2.038 | 2.113 | 1.995 | 1.880 |
| Zero-air Void curve                |       |       | 2.159 | 2.030 | 1.921 |

#### B- Moisture Calculations :-

|                                  |       |       |       |       |       |
|----------------------------------|-------|-------|-------|-------|-------|
| Weight of wet soil+container (g) | 250.0 | 250.0 | 250.0 | 250.0 | 250.0 |
| Weight of dry soil+container (g) | 243.4 | 239.2 | 233.7 | 228.3 | 223.4 |
| Weight of container (g)          | 30.0  | 30.0  | 30.0  | 30.0  | 30.0  |
| moisture content(%)              | 3.1   | 5.2   | 8.0   | 10.9  | 13.8  |

#### C - Dry density-Moisture relationship:-

$$\text{M.D.D} = 2.113 \text{ gm/cm}^3$$

$$\text{O.M.C} = 8 \text{ %}$$

### I-Introduction

General Consultant : SYSTRA  
 Consultant : SPECTRUM  
 Contractor : شركة القمة للمقاولات  
 Sample : Coarse Aggregate Filter layer.  
 Station : St(361+300) to st(361+500)  
 Date of Test : 01-09-2023

### II- Sample description:

Coarse Aggregate mix

### III- Required tests and Results:

| Required tests   | Results             |
|--|---------------------|
| 1- Specific gravity (SG), absorption and degradation.0 | SSD                 |
|  | Absorption          |
|  | Degradation         |
| 2- Grain size analysis                                 | As shown in figuers |
| 3- Los Angeles test                                    | Abrasion ratio      |
|  | 30.0%               |

### IV- Notes

- Samples were brought by : Contractor.
- Samples are responsible from the Person who brought it.
- The results are applying only for the present report.

 Accredited by : Egypt Accreditation council (EGAC) under No. 031706/1A

Absorption and specific gravity for  
Coarse Aggregate  
ASTM C 127 - AASHTO T 85

|  |      |
|--|------|
| Weight of sample                             | 2500 |
| Weight of saturated - dry surface sample (B) | 2537 |
| Weight of saturated sample in water (C)      | 1567 |
| Weight of dry sample afre heating (A)        | 2495 |

Results:-

|   |       |
|---|-------|
| Saturation surface dry spicific gravity = B / (B-C) | 2.615 |
| Bulk spicific gravity = A / (B-C)                   | 2.572 |
| Apparent spicific gravity = A / (A-C)               | 2.689 |
| Absorbtion of water = ( B-A)/A*100                  | 1.68  |
| Degradation of aggregate = (2500-A)/ A*100          | 0.2   |

### II- Sample description:

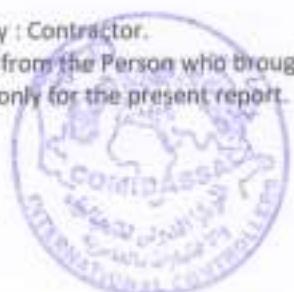

Gravel and sand.

### III- Required tests and Results

| Required Tests  | Results             |                       |
|---|---------------------|-----------------------|
| 1- Grain size analysis and classification and Percentage of MATERIALS FINER THAN No. 200 ( $75 \mu m$ ) | Grain size analysis | As showed in appendix |
|   | Classification      | A-1-b                 |
|   | Pass From No.200    | 14.5%                 |
| 2- Modified compaction (Proctor test)   | MDD                 | 2.111                 |
|   | OMC                 | 7.0%                  |
| 3- Liquid limit, plastic limit and plasticity index   | LL                  | 23.2%                 |
|   | PL                  | 21.1%                 |
|   | PI                  | 2.1%                  |
| 4- California bearing ratio (CBR)   | CBR ratio           | 30%                   |

### IV- Notes

- 1- Samples were brought by : Contractor.
- 2- Samples are responsible from the Person who brought it.
- 3- The results are applying only for the present report.

### Liquid and Plastic Limits Test ASTM - D 4318

| Test No                     | 1            | 2     | 3     | 4     | 5             | 6     |
|-----------------------------|--------------|-------|-------|-------|---------------|-------|
| Type of test                | Liquid Limit |       |       |       | Plastic Limit |       |
| NO of B.                    | 36           | 27    | 24    | 19    |               |       |
| Container No                | S            | D     | F     | G     | H             | K     |
| Mass of wet soil +container | 48.30        | 48.90 | 47.70 | 50.00 | 30.60         | 30.00 |
| Mass of dry soil +container | 44.80        | 44.60 | 43.40 | 45.00 | 30.10         | 29.10 |
| Mass of container           | 26.90        | 25.70 | 24.90 | 25.01 | 27.80         | 24.70 |
| Mass of moisture            | 3.50         | 4.30  | 4.30  | 5.00  | 0.50          | 0.90  |
| Mass of dry soil            | 17.90        | 18.90 | 18.50 | 19.99 | 2.30          | 4.40  |
| Moisture content            | 19.55        | 22.75 | 23.24 | 25.01 | 21.74         | 20.45 |

#### Results:

Liquid Limit (L.L) : 23.2 %.  
 Plastic Limit (P.L) : 21.1 %.  
 Plasticity Index (P.I): 2.1 %.
